

How to buy your CLOUD

Adapted from <https://buyingomisego.com/>

CLOUD is now a cryptocurrency.

If this is your first time with Ethereum or cryptocurrencies in general, starting now can be daunting. Fortunately, this guide can help you get started and get you one step closer to becoming a Clout God™.

If you are new to cryptocurrencies, start here:

1. [Setting up your personal Ether Wallet \(using MyEtherWallet\)](#)
2. [Buying Ether with Coinbase](#)

If you are familiar with Ether and already have Ether in Coinbase, start here:

3. [Moving Ether into your Ether Wallet](#)

If you have Ether in an Etherwallet, start here:

4. [Buying Clout using your Ether Wallet](#)

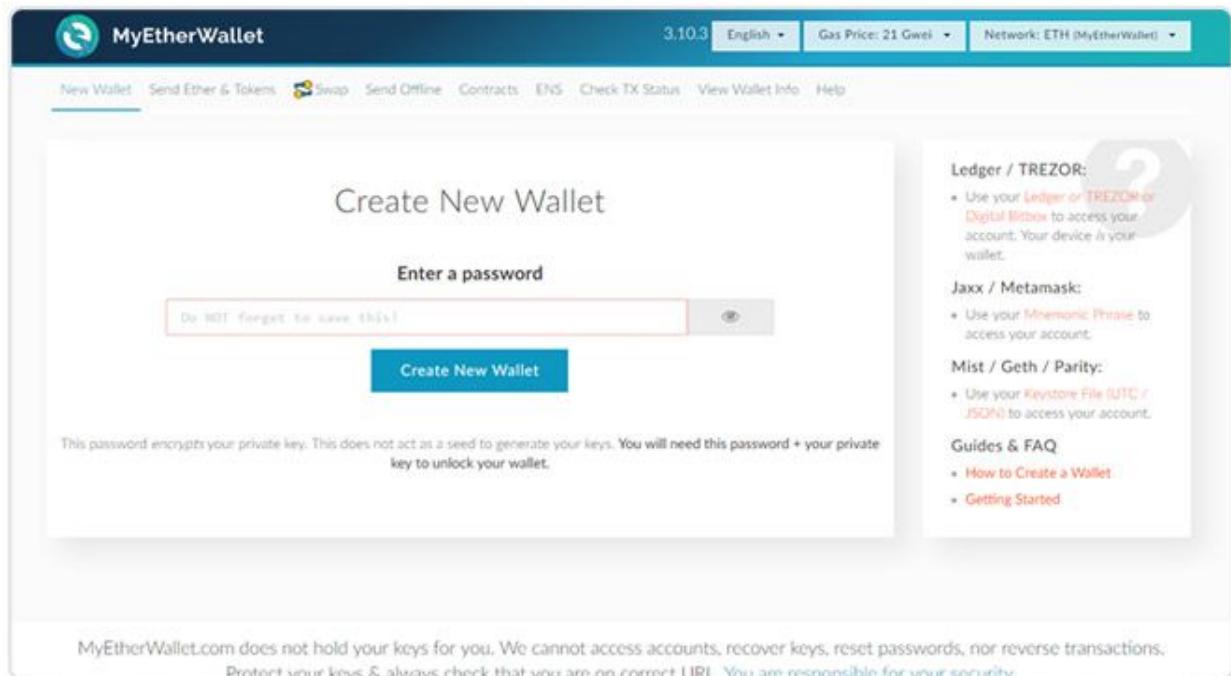

Setting up MyEtherWallet

Clout Tokens now live on the Ethereum Network. So

The easiest & most convenient wallet option for storing your Clout Tokens - provided by **MyEtherWallet**.

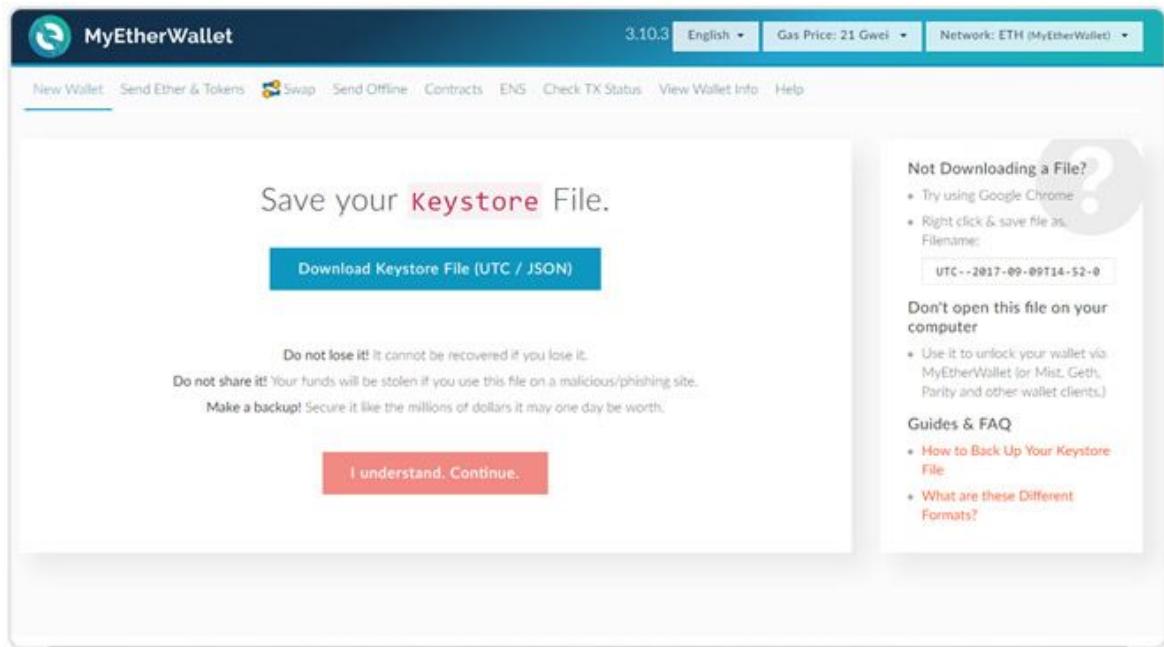

Step 1 - Starting with MyEtherWallet

- Go to www.myetherwallet.com and enter a **password** that would be hard to guess (but which you won't forget!).
- Press '**Create New Wallet**'.

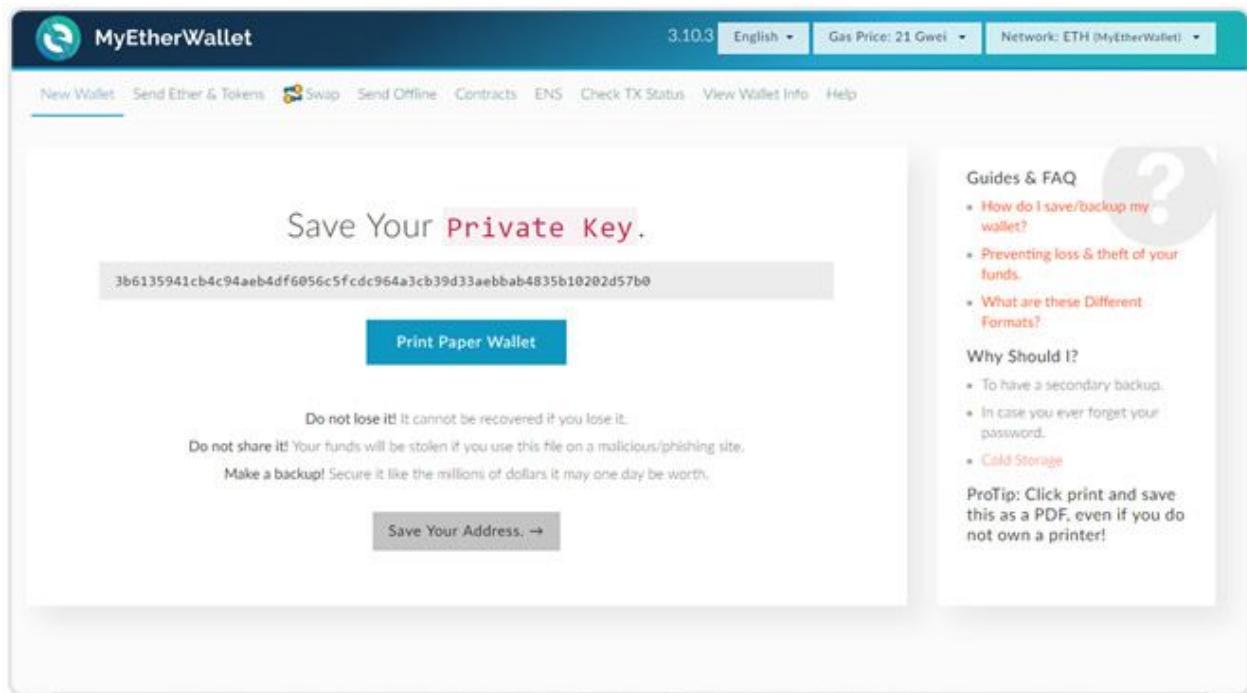

Step 2 - Getting your Keystore File

- Click 'Download Keystore File'. Be sure to read and understand the warnings.
- It's **very important** that you back this file up somewhere safe (think multiple external hard drives and/or USB drives that you put somewhere safe).
- Once you've done that, click '**I understand. Continue.**'

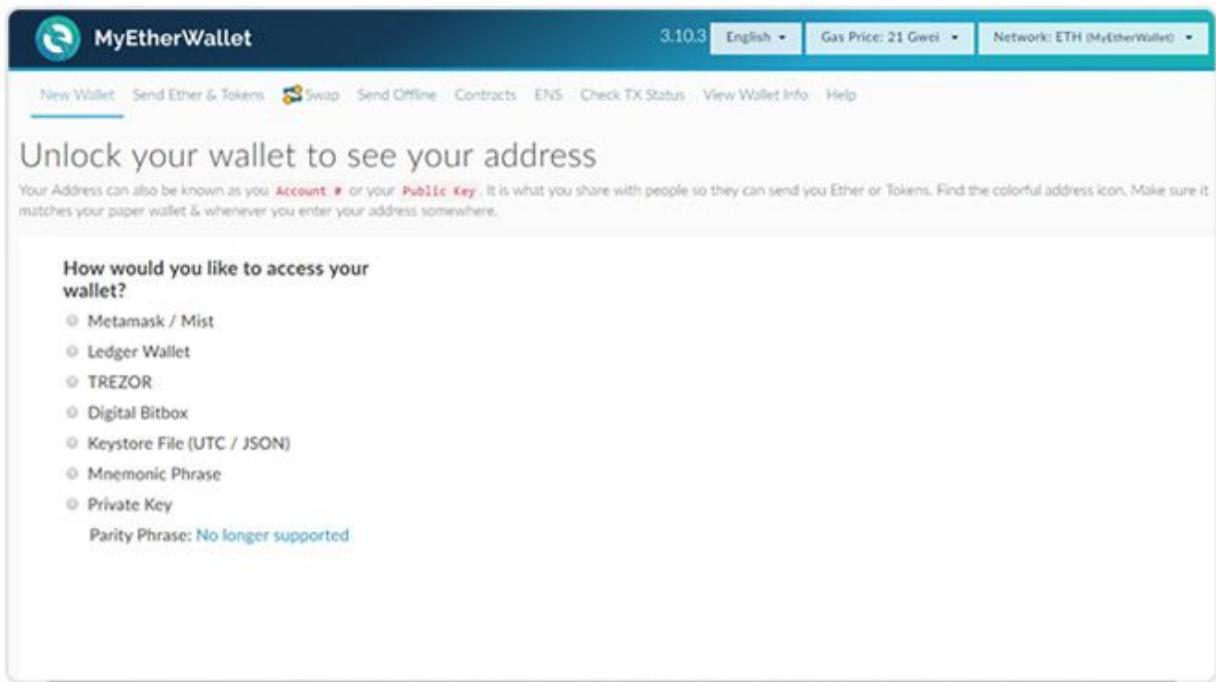

Step 3 - Securing your Private Key

- Now you will be given a **powerful unencrypted private key** to your wallet (it's a way of opening your wallet without knowing the password) and the option to print a **paper wallet** (which displays everything you would need to access your wallet)
- If you choose to print this paper wallet, treat it just like the Keystore file you just downloaded - keep it hidden and keep it safe.
- Next, click '**Save your address**'.

Step 4 - Logging into your new Ether Wallet

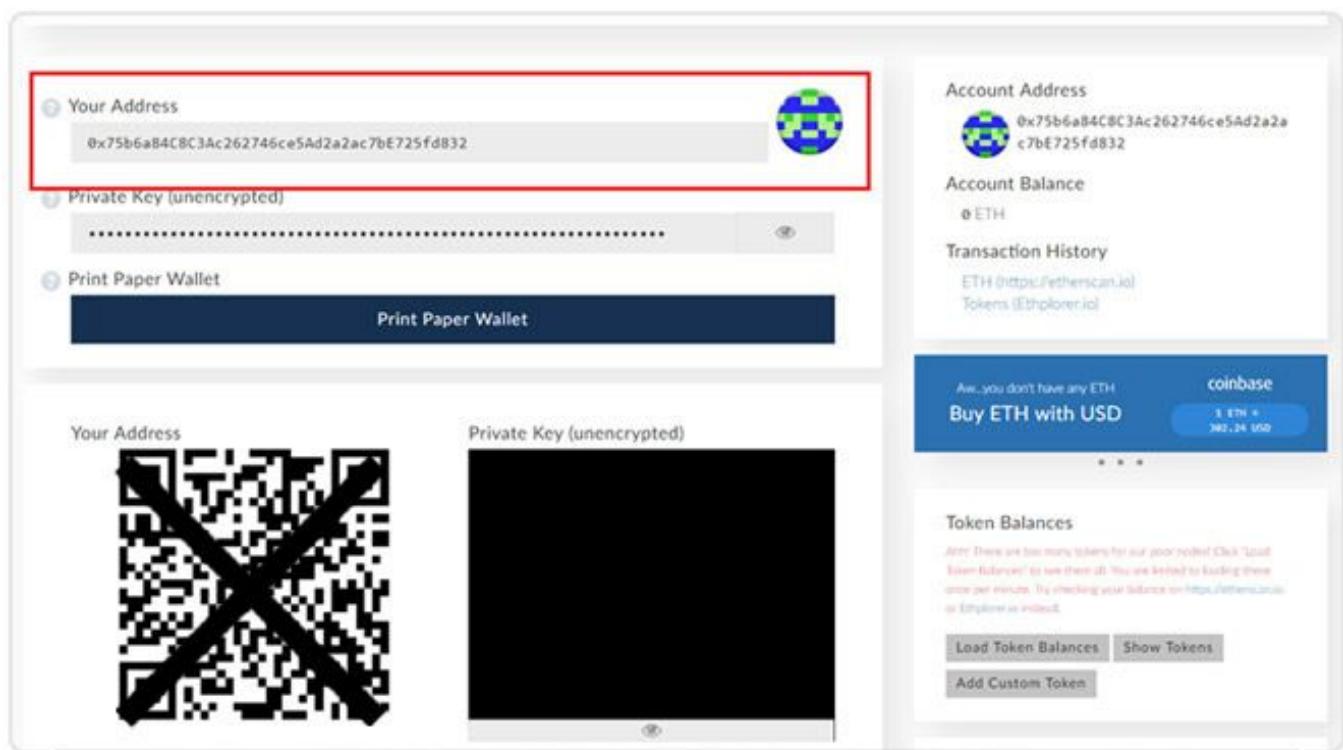

- Now we're going to log into your new wallet. To do that you can either:
 1. Select the '**Private Key**' option, then paste your **private key** into the box.
 2. Select the '**Keystore File**' option, then upload the keystore file you saved in step 2, then enter your **password**.

- Once you've done one of those two things, scroll down the page to see your newly opened wallet.

Step 5 - Finding your Public Wallet Address

- You will see a long string of letters and numbers labelled '**Your Address**'.
- This is your public **wallet address**, and it's where we're going to be sending you Clout Tokens.
- Copy this public address and keep it handy as we're going to need it soon.

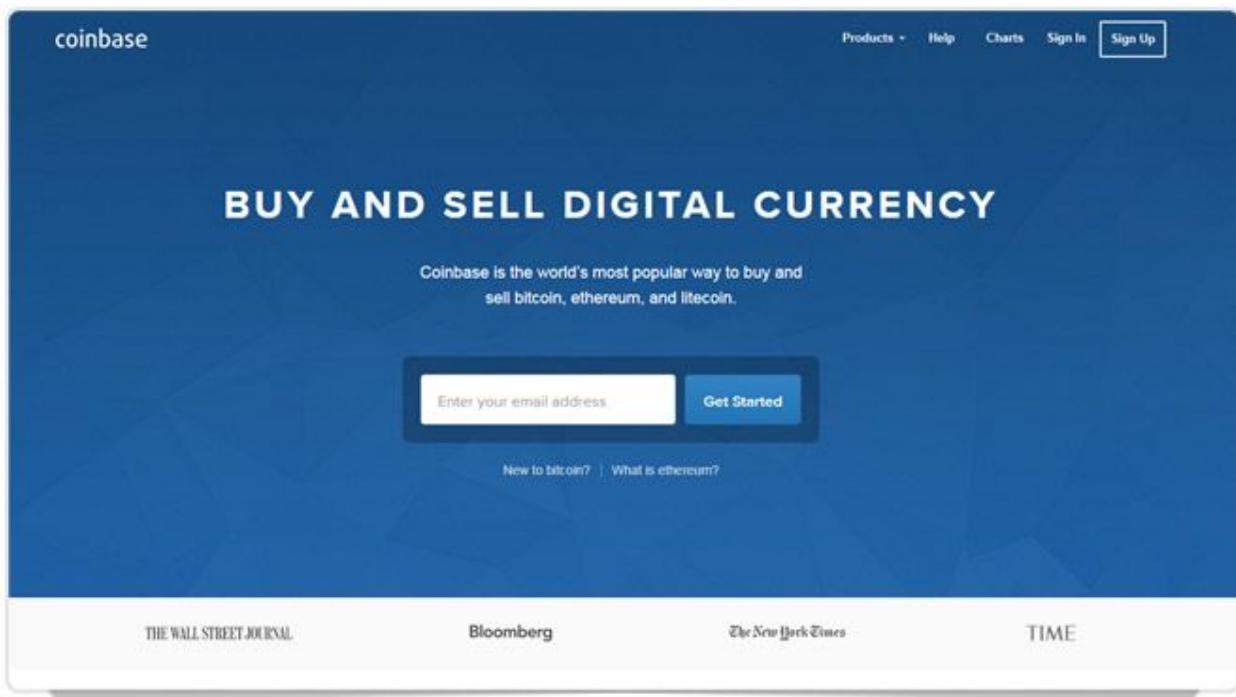

Setting up Coinbase and buying Ether

You can't currently purchase Clout directly using fiat currency (dollars, euros etc).

So first we'll purchase the popular cryptocurrency Ethereum, and then we'll exchange that for CLOUT (if you already own Ethereum you can skip ahead to Step 11).

Step 6 - Starting with Coinbase

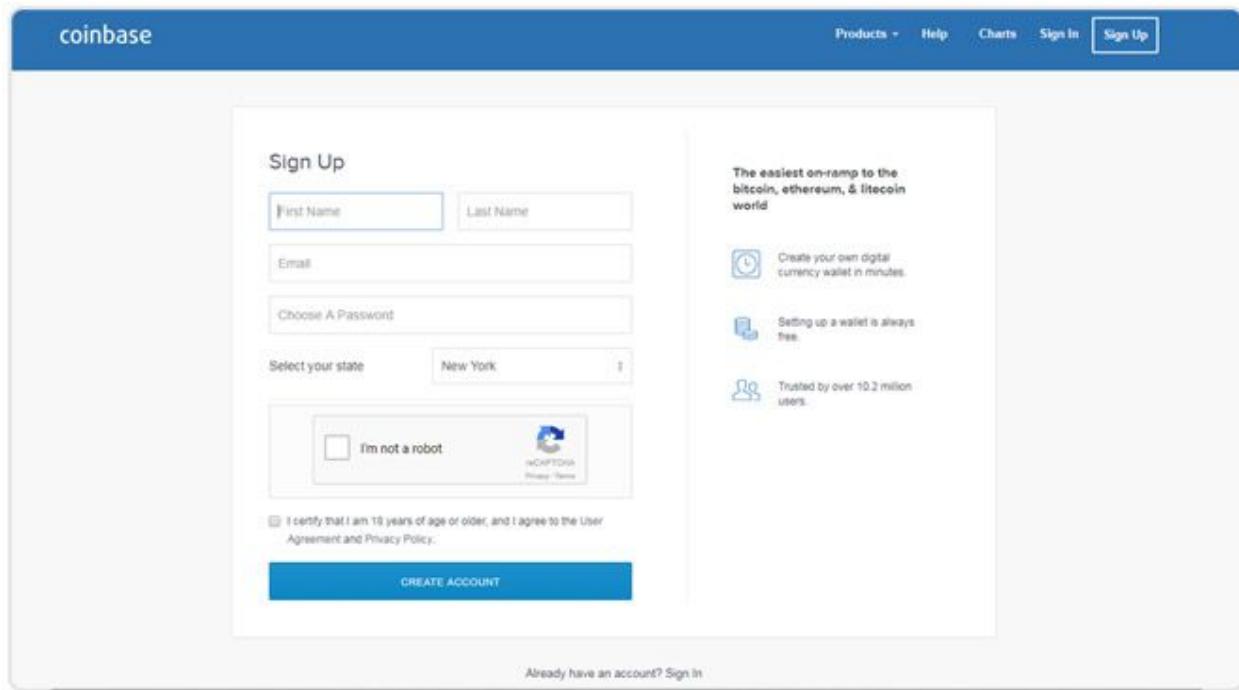

- To buy Ethereum we'll sign up with the most popular cryptocurrency website on the net - **Coinbase**.
- Coinbase operates in [32 countries](#), but if your country isn't on that list, or you just want to use a different exchange, some great alternatives are [listed here](#).

- If you use [this affiliate link](#) to sign up to Coinbase we will both receive \$10 of free coins if you spend over \$100 (or its equivalent in your local currency).

Step 7 - Signing Up for Coinbase

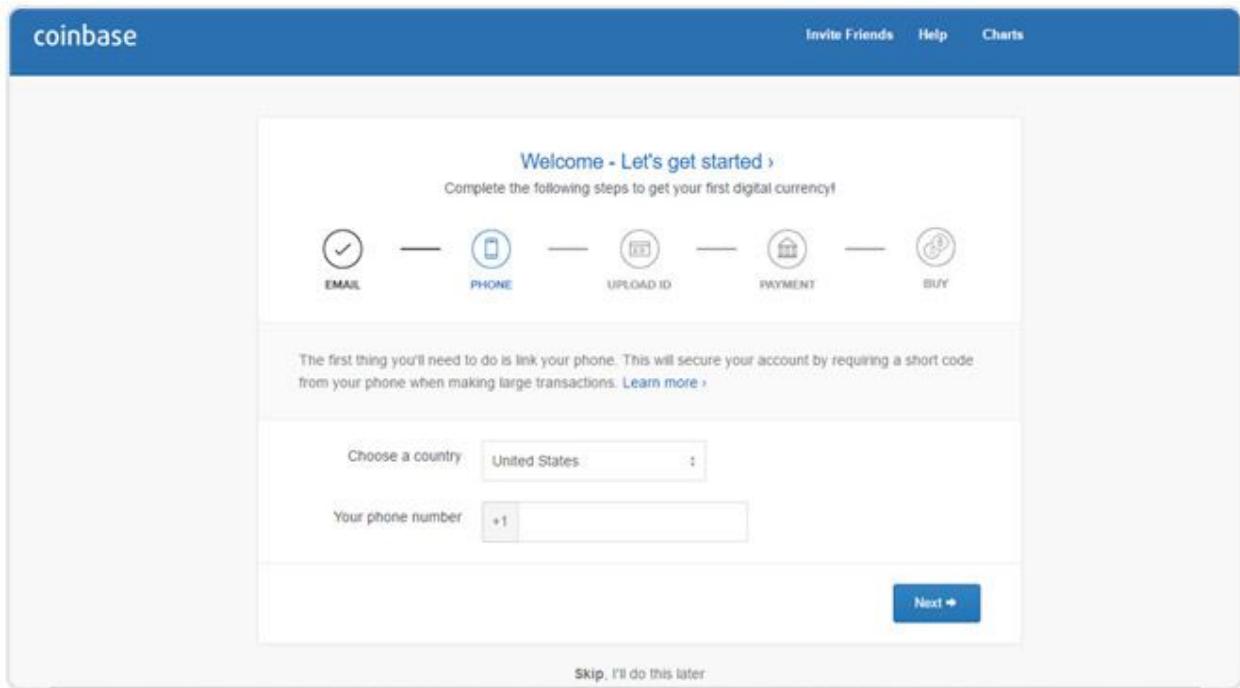

- So, [go to Coinbase](#), press the 'Sign Up' button and fill out your name (make sure this is exactly how it's written on your photo ID), email, password and location.

- Just like a US bank, **Coinbase** is regulated by the US government and has to follow strict financial rules. So they take **verifying your identity** very seriously. It's a pain, but it does give Coinbase a reputation for being the most trusted way to convert fiat currency to cryptocurrency.

Step 8 - Coinbase Verification

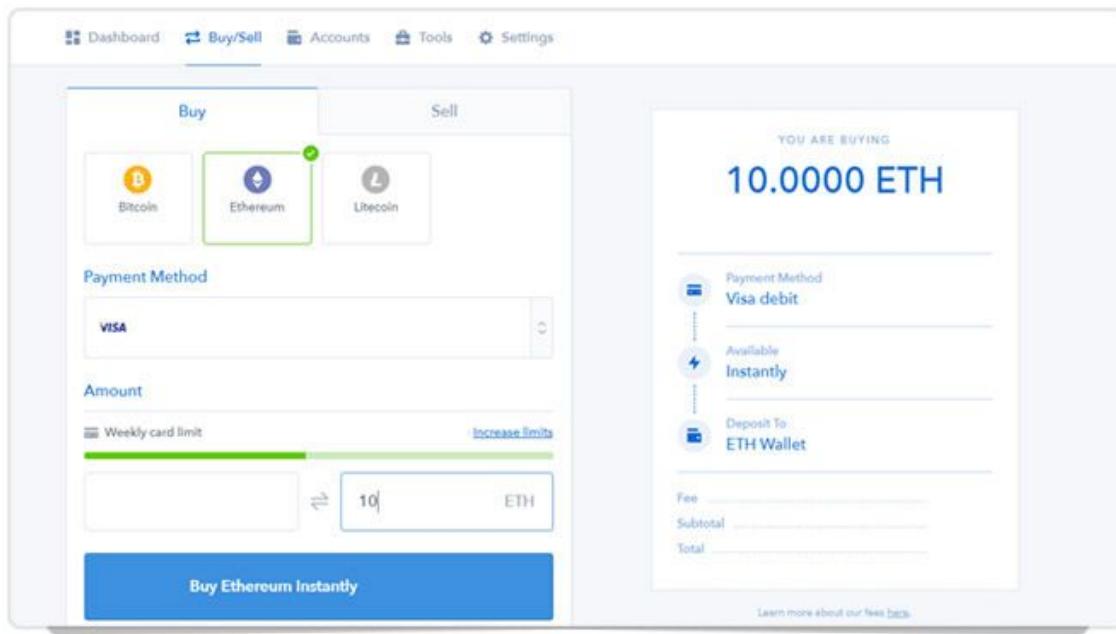

- To verify your account you must supply a **phone number**, upload an image of your **photo ID** and verify a **credit/debit card** or bank account before you can buy.

- Using a **credit/debit card** means **slightly increased fees** but offers **instant purchasing**. Using a bank transfer is cheaper but slower (taking up to a week to get your currency).

Step 9 - Buying Ethereum

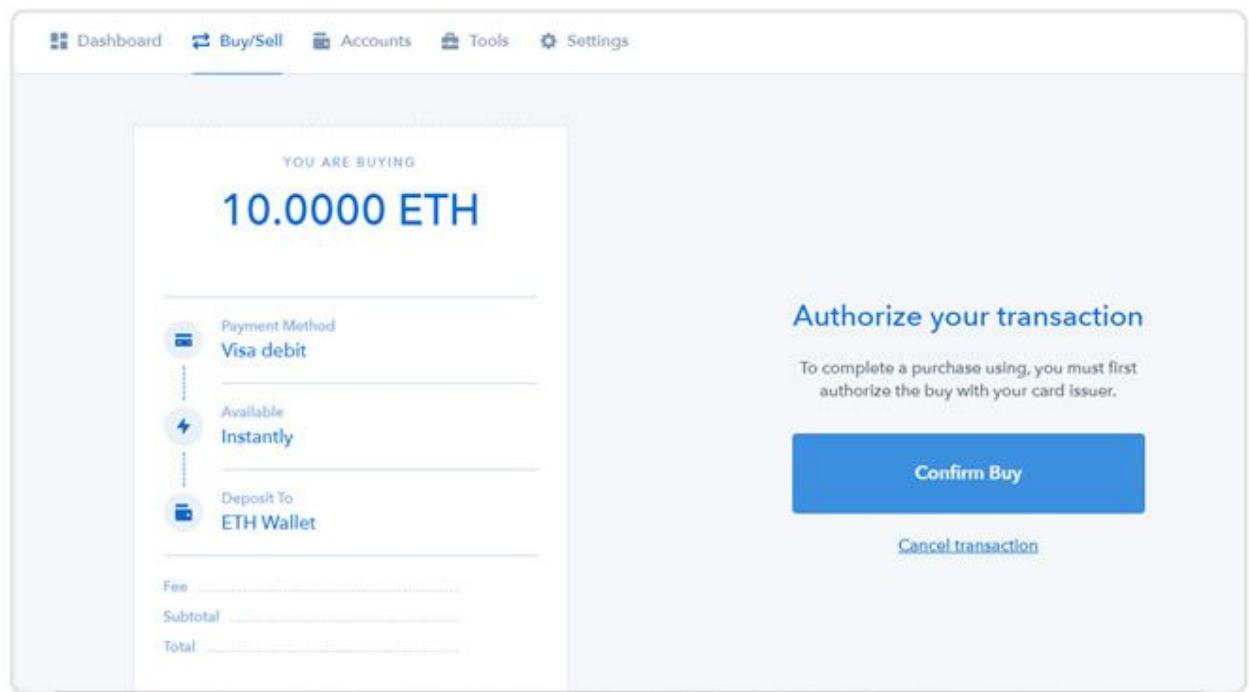

- Once your payment details are verified, click '**Buy/Sell**' on the top menu.
- Select '**Ethereum**', then at the bottom of the page choose how much to spend in your local currency / how many coins you want to buy.

- Once you're happy with the amount, click the big '**Buy**' button.
- If you're unsure how much to buy, try \$10 - \$20 for your first time.

Step 10 - Confirming Purchase

- You'll be asked to confirm your purchase.
- Press '**Confirm Buy**'.

Congratulations! You now own some Ethereum. But don't close Coinbase yet, we're going to need it again in a few minutes.

Moving Ether from Coinbase to MyEtherWallet

Congrats, you've purchased Ether!

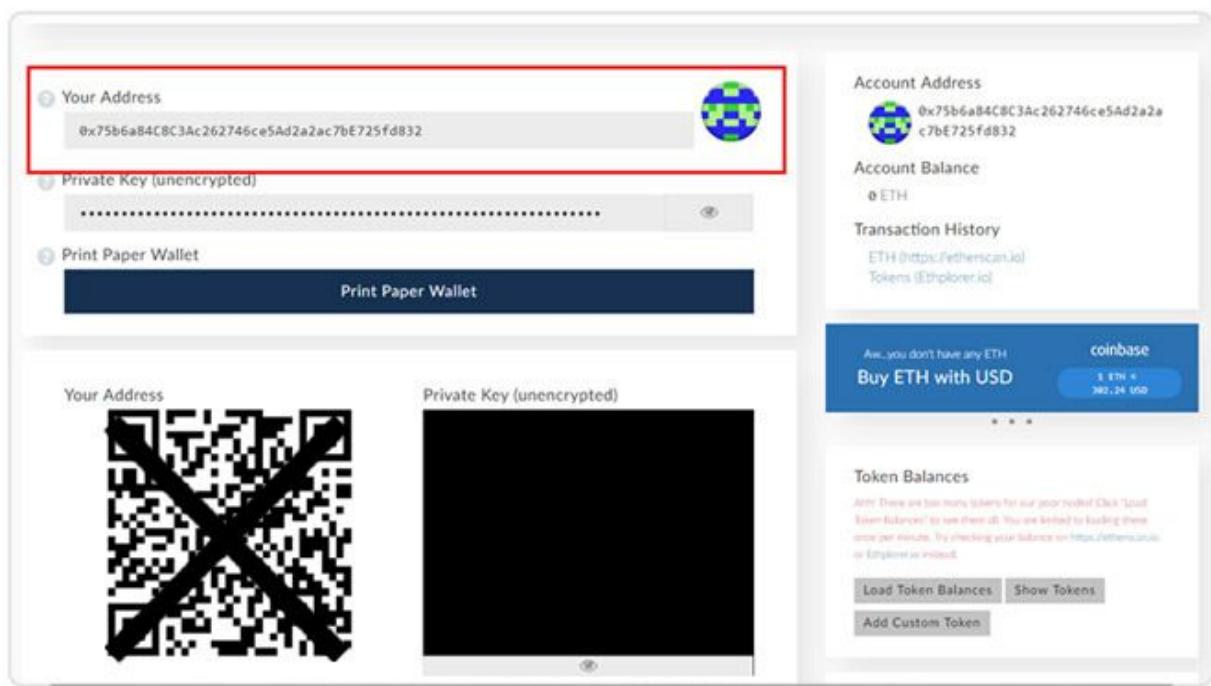

Now we must move the Ether into the EtherWallet you setup earlier.

Your **dedicated EtherWallet** will handle the storage, trade, and exchange of all Ethereum based tokens including CLOUT. It's exclusively yours, so keep it safe.

Reminder: You cannot purchase CLOUT using Coinbase.

Step 11 - Preparing MyEtherWallet to receive Ether

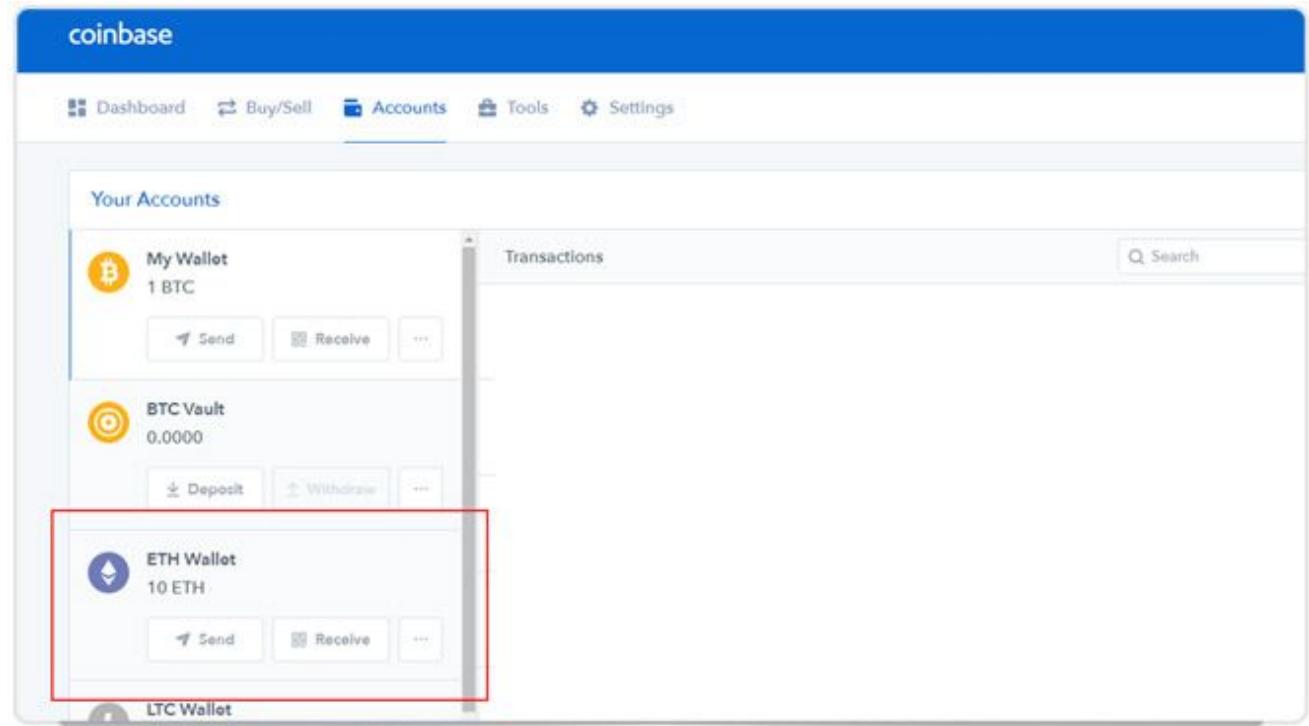

- Grab your public **Wallet Address** that we saved earlier. This is where we will be sending our newly bought Ether from Coinbase.

- If you forgot your public address, log back into your Ether Wallet. If you forgot how to do this, refer to [Step 4 - Logging into your Ether Wallet](#).

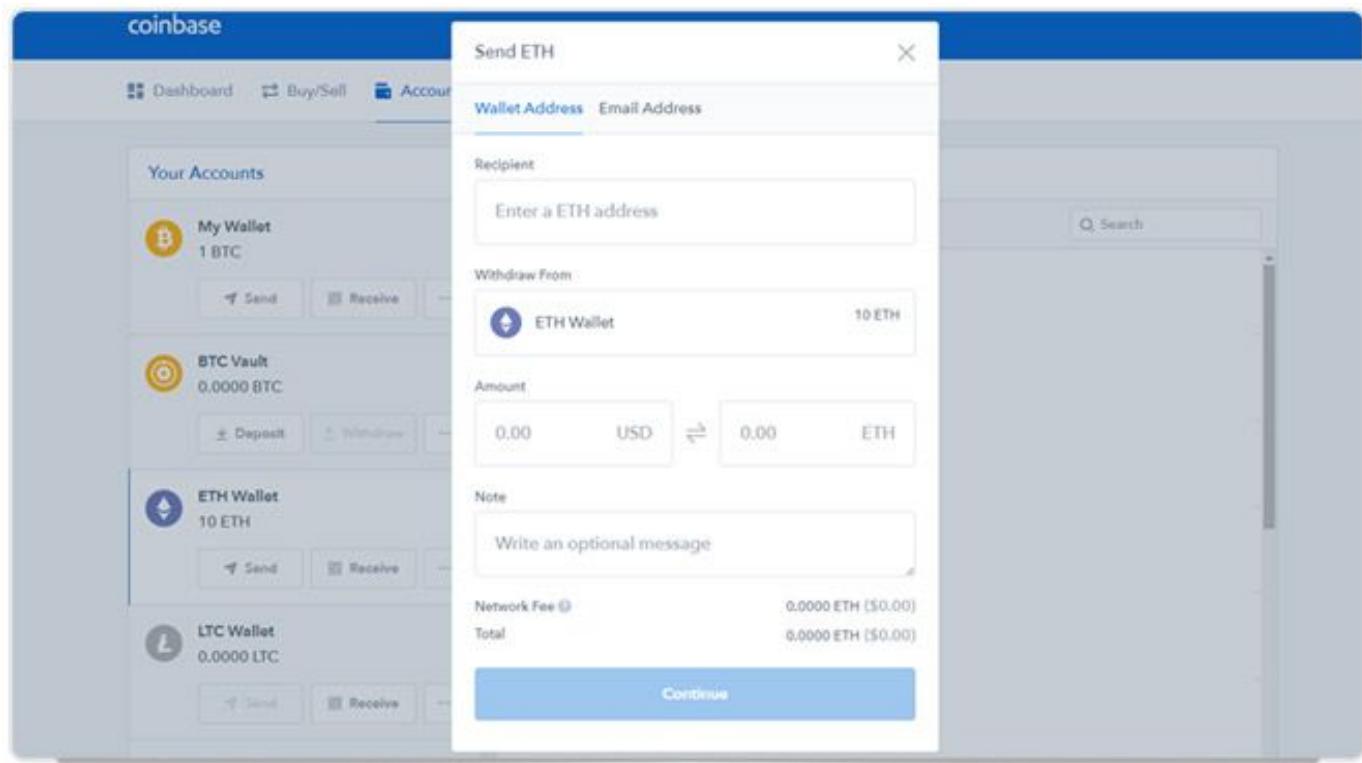

Step 12 - Sending Ether from Coinbase to MyEtherWallet

- Return to Coinbase.
- Click '**Accounts**' from the top menu, then find your Ethereum wallet listed on the left.
- Click '**Send**'.

Step 12 - Sending Ether from Coinbase to MyEtherWallet

- In the 'Recipient' box, paste the Ethereum **Wallet Address** we just copied from MyEtherWallet.
- In amount, type how much Ethereum you wish to send (there is a 'use max' option if you wish to send it all).
- Click '**Continue**'.

- Coinbase may ask you to confirm with your password/phone. Follow the instructions until it confirms the Ethereum are sent.

BREATHER

- Now we've got to wait a few minutes for the coins to move across the network.
 - Unless there's an unusually large network backlog, the Ether takes between 5 and 30 minutes to appear in your Ether Wallet.
 - The Ether Wallet page will update automatically so there's no need to refresh the page.
 - While you're waiting, consider sharing this guide with your friends and followers to spread the word about CLOUT, encouraging its popularity and value to grow.
-

Buying CLOUD using your Etherwallet

You're only one step away from getting some sweet clout.

Now that your Ether is in your Ether Wallet, we have to send it to the Clout Token contract to receive our CLOUD.

Step 13 - Logging back into MyEtherWallet

- At myetherwallet.com click “**Send Ether & Tokens**” at the top
- Log in using your preferred method (Private Key or Keystore File).

The screenshot shows the MyEtherWallet interface. At the top, there's a navigation bar with the logo, version (3.10.3.1), language (English), gas price (21 Gwei), and network (ETH). Below the bar are links for New Wallet, Send Ether & Tokens (which is underlined, indicating it's the active page), Swap, Send Offline, Contracts, ENS, Check TX Status, View Wallet Info, and Help.

The main content area has a heading "Send Ether & Tokens". On the left, there's a section titled "How would you like to access your wallet?" with several options: Metamask / Mist, Ledger Wallet, TREZOR, Digital Bitbox, Keystore File (UTC / JSON) (which is selected), Mnemonic Phrase, and Private Key. Below this, a note says "Parity Phrase: No longer supported". On the right, there's a "Select Your Wallet File" section with a "SELECT WALLET FILE..." button.

Step 14 - Buying CLOUT

- You should see the Ether in your Wallet on the top right hand side.
- In the 'To Address' box, **paste the following Address verbatim:**

0x572781e7b021d2b3f3f082b3e487234ce9fc2961

- In '**Amount to Send**', type how much Ethereum you wish to send.
- In '**Gas Limit**', leave it as is. It only affects how fast the transaction occurs, the default is fine.
- Verify the sending address is correct, then click '**Generate Transaction**'.
- Click '**Send Transaction**'. Verify everything is correct one last time, and click '**Okay**'.
